Figure 1 consists of 12 bar charts arranged in a 6x2 grid. Each chart compares four groups: All respondents, Nonusers, Users, and Former users. The y-axis for all charts represents the percentage of respondents, ranging from 0 to 100. The x-axis for each chart lists the demographic or attitudinal variable. The variables are: Age, Sex, Education, Income, Marital status, Employment status, Health status, Attitude toward the Internet, Attitude toward the Internet for health, Attitude toward the Internet for health care, Attitude toward the Internet for health care services, and Attitude toward the Internet for health care services. The charts show that users and former users generally have higher percentages of higher education, higher income, and more positive attitudes toward the Internet and health care services compared to nonusers.
